

Description

Arduino® Nano is an intelligent development board designed for building faster prototypes with the smallest dimension. Arduino Nano being the oldest member of the Nano family, provides enough interfaces for your breadboard-friendly applications. At the heart of the board is **ATmega328 microcontroller** clocked at a frequency of 16 MHz featuring more or less the same functionalities as the Arduino Duemilanove. The board offers 20 digital input/output pins, 8 analog pins, and a mini-USB port.

Target Areas

Maker, Security, Environmental, Robotics and Control Systems

Features

- **ATmega328** Microcontroller
 - High-performance low-power 8-bit processor
 - Achieve up to 16 MIPS for 16 MHz clock frequency
 - 32 kB of which 2 KB used by bootloader
 - 2 kB internal SRAM
 - 1 kB EEPROM
 - 32 x 8 General Purpose Working Registers
 - Real Time Counter with Separate Oscillator
 - Six PWM Channels
 - Programmable Serial USART
 - Master/Slave SPI Serial Interface
- **Power**
 - Mini-B USB connection
 - 7-15V unregulated external power supply (pin 30)
 - 5V regulated external power supply (pin 27)
- **Sleep Modes**
 - Idle
 - ADC Noise Reduction
 - Power-save
 - Power-down
 - Standby
 - Extended Standby
- **I/O**
 - 20 Digital
 - 8 Analog
 - 6 PWM Output

1 The Board

1.1 Application Examples

Arduino Nano is the first embedded microcontroller in the Nano series with minimum functionalities, designed for mini projects from the maker community. With a large number of input/output pins gives the advantage of utilizing several serial communications like UART, SPI and I2C. The hardware is compatible with Arduino IDE, Arduino CLI and web editor.

Security: The high-performance and low-power capabilities gives the chance to develop security based applications like access control systems using fingerprint sensors. The flexibility to interface sensors and external devices using serial communication has improved the scope of utility.

Environmental: The low-power feature of the microcontroller and the power supply options for the board has enhanced the ability to implement remote IoT projects related to environmental issues.

Robotics: Robotics has always been the favorite area of exploration for the Maker community and with this tiny embedded hardware you can now create complex and advanced robotic applications.
